All I can find on Google is that it is an error that happens in Perl DBI. (
http://www.google.co.nz/search?q=+dbih_setup_fbav:+invalid+n
umber+of+fields&hl=en&lr=&start=10&sa=N)

Perl DBI (DataBase Interface) is the most common database interface for the Perl programming
language. DBI was specified by Tim Bunce, in collaboration with others, starting in 1994, and is
currently maintained across the Internet as a CPAN module in accordance with the Open Source
model. DBD (DataBase Driver) serves as an abstraction layer which allows programmers to use
nearly platform-independent SQL code in their applications.
en.wikipedia.org/wiki/Perl_DBI

However, I have never coded in Perl, so thats about as helpful as I can be Sorry.
