[BBSshadow wrote on Tue, 15 November 2005 01:51]I am running windows XP Professional and when ever I try to install Renegade I get the auto run and when I click Install it comes up with a white window with Renegade Setup in the title bar and then a get an error message that looks like this "Setup has encountered a problem and needs to close. We are sorry for the inconvenience. If you were in the middle of something, the information you were working on might be lost. Please tell Microsoft about this problem
We have created an error report that you can send to us. We will treat this report as confidential and anonymous

To see what data this error report contains, [click here.](#)"

As I told earlier I had the same problem, but thanks to the help of Dead6re I've successfully installed it.

First delete everything you have on Renegade including the registry, you may want to keep your saved game.

Then reboot and explore the install disk and search for Vbrun60 in the map Setup.
Klick it.

Run the setup (not the autorun.)

This worked for me so good luck!!!!!!!
