ok man lets make this so even you can understand

1 !rg ika = ika using rg
2 !rglocate ika = not found

we understand this
fact ika was using rg
fact if ika was not using rg the bot would state that ika is not using rg.
the point is i was using rg.
fact i have no need to cheat have no desire to cheat and will not cheat.

if i was not using rg and all of this happened then that would be all bad. but i use rg and will not play if rg is not working.
so your point is what. i was not found on the rg network. lol since this whole thing has happen i have checked myself while in the unrules server and it said i was idle another time said i was not found. hmmmmmm so what does that tell you. does that tell u i have access to the un server and put a file there. lmao o wait i have access to the rg network right. lmao dude you are plainly a idiot for even accusing me of such shit. you have more knowledge about this sort of shit then i do. i dont even bother with shit like that but obviously you do.

btw the file is not to block admins from forcing rg it is to stop the other players from what i remember.
