When I got a new video card (Geforce 6800) I wanted to see how well Far Cry would run, so I downloaded the demo to test it out. But for some crazy reason it looks like shit whether I max it out or not... it looks like it's stuck on DirectX 7 or something. I tried downloading both demos but it does the same thing. My drivers are updated and all, so I'm not sure what the issue may be. I'm too curious to leave this be, so help would be appreciated.
