I'm sorry for not closing every tag I open when it's not needed and using Javascript in a few places if it offends you and makes your browser cry to itself.

Differences between how browsers deal with numbers is a little irritating, I'll fix the overflow maybe tonight after I eat something. Like, maybe in eight hours.

It doesn't offend me, I just don't bother with sites that don't display correctly.

It's things like having no doctype and invalid declarations that is probably making your site display incorrectly. If you don't want to fix it thats your business, I just thought you might like a bit of advice....

I started coding html when I was 11 and I could have done a better job even then.

To make this post a little constructive I'll say this.  Get over your ego and follow some standards.
