i hate vodka...beer is better and is of benefit to you kidney.Vodka is just highly concentrated ethyl alcohol with lots of aroma...

Beer might give you a belly, but Vodka gives you a big chance of catching pneumonia, meningitis and urinary tract infections.Thats because it creates a environment, suitable for the bacteria, that actualy causes the above (its name was "banani" or "bananni" or something that sounded like "bananas").Cheap vodka also has methyl alcohol that can cause blindness and death.

and getting high?dont you have a life or something?

Oh and the poem does suck, btw...
