The laser fence is nice. The beams just need to be spread out more so there isn't a large gap at the bottom. (and 1 beam removed, since in that screenshot from TS it only has 3 beams, but that isn't necessary...)

TS design, weird we know.

BUT... Other then the fact that both have 3 large objects around the center body, that model really doesn't look anything like that icon. Actually, it doesn't look like any reference from TS.
