Hey all. Today I just bought a new graphics card. Is it good? What will my FPS be? Here is the specs:

Name: 3D Blaster 4 Titanium 4200

This is what it said on the package: We've taken Nvidias Geforce 4 Titanium Processor and combined it with 64MB of DDR memory clocked at 500MHz. to create a gamer's dream. IN addition to having the most complete featured set on the market featuring teh nfinite FX II engine, nviewdisplay technology, Lightspeed Memory Architecture II and Accuvie Anti-aliasing, it also has incredible raw performance processing 4 billion AA samples per second and can perform an amazing 1.03 trillion operations per second. It also has TV out for multi screening.

So, your thoughts?
