Comrade wrote on Sun, 12 February 2006 00:32@Ethanol: That's not the only problem, Ethanol is far from being a global solution, considering the whole climate change factor and such. You can't really rely on something that relies on something that's getting more and more unstable over the years.

@Hydrogen: Yeah, but liquid Hydrogen (nobody said anything about using its gas form) isn't unstable. Driving a vehicle that's powered by liquid Hydrogen is just as dangerous as driving one that's powered by either gasoline or diesel.

@csskiller: Pesticides are more of an issue.
It isn't a global solution, hydrogen will be the future regardless imo. It burns clean as you get and is quite powerful. They just need to learn how to harness it properly.
