Apache wrote on Sat, 11 February 2006 22:00 Personally, being a rabid car fan, I think that hydrogen is totally the wrong direction to be taking. It requires massive rebuilding of infrastructure, and is actually VERY dangerous too. Hydrogen gas is extremely explosive, and I definitely wouldn't want to be sitting on a tank of it!

The right course of action they need to take is ethanol, and bio-diesel.

A hydrogen bomb was the first thing I thought of before I saw the 10,000 psi Tank... DANGER. I was told that bio diesel was the new thing to look forward to. Hydrogen fuel cells took me by surprise, and I am completely ignorant on the subject. I am however, from a racing family and methanol is a big player in the modified series. The biggest concern with methanol is the amount of fuel consumed by the engine.

I think this may be a concern with ethanol as well.

the bed to Gold Digger is sang by Ray Charles, not Jamie Fox
