Just some notes on the install process.

When you start RenGuard, it should say something about doing a Core Patch precheck.

Then, it should check your maps and stuff.

If any of them dont match what Core Patch 2 is looking for, it will give you an error and display a list of links in the web window.

Download and unzip these files (into the renegade data folder).

Should any of them give you a 404 error (or any other error), PLEASE let us know which one right away (posting here is good)

Then re-start renguard.

Once all the files are correct, it will start downloading Core Patch 2.

For people with Core Patch 1, it should download cp2.zip

For people without Core Patch 1, it should download patchall.zip

If it doesnt download the right file (e.g. patchall.zip for people with CP1 installed), it indicates a problem somewhere (if this happens to you, post here (with your AIM/MSN/ICQ/Yahoo if you have it) and I will help you out (or just talk to me on AIM/MSN/ICQ/Yahoo)

Also let me know if the Core Patch 2 downloader starts up and downloads but then gives an error about "old file not found" or similar (look for a label on the download form that tells you the file that its looking for, I need that information too)
