I downloaded renguard cp2 today. Previously I have used the number pad as my movement controls. After the update when I try to move, it freezes up and I have to push numberpad0 or numberpad. to unfreeze it.

Is there a way to fix this problem?

My set up if you wish to test it is forward (num8) back num(5) left num(4) right num(6) turn num(7) and (9) with 180 spin num(2) and jump num(0) crouch num(.) enter/use num(enter).

My system specs are asus a8n motherboard, athalon 64 3500, 2x 1 gig low latency ddr3200, radeon x800, soundblaster audigy 2 live, windows xp pro (fully updated).
