My problem with RA2 is that the setup won't run. I put the disc in, the autoplay starts, I click the install button, then it just doesn't start. I tried compatibility mode on the CD's Setup.exe and launched it there, but it still won't work. What really sucks is the fact that I've got four computers, three of them are XPs, and the '98 is so slow that I can barely surf the Internet on it.

Now so that I don't hijack or anything: Wow, that sucks. I'd try reinstalling it maybe, or shutting down and restarting your computer.

Crappy laptop's right shift key, the one I use, is gone.
