You can always launch the game *without* Renguard by browsing to your renegade folder (usually C:\Westwood\Renegade\ or C:\Program Files\Westwood\Renegade), and double-clicking game2.exe

As for your problem, from the screenshots you provided it looks like RenGuard is either crashing or hanging for some reson.

Can you tell what Operating System you are running? And have you tried temporarily disabling your windows firewall to see if that helps?
