Hey guys,

OK, so... I re-installed my Renegade. And you know how after you install Renegade, you start it up, then you click on multiplayer internet, westwood, advanced game listings then you download some patch thingy... That just wont come up. It just skips that download and goes straight to the listings, and all the listings say is: VERSION MISMATCH, all the way down the list. I deleted every sign of renegade/westood so that I could start from stratch, and that didnt work either. Any one have any ideas? Please help, I want to play ren some time soon...lol

thanx,

EleMeNtaL
