OK here is the score, Ever since ive had renegade ive played online thru gamespy. Now that the new renalert is out ive been trying to play thru the game thru WOL.

Every single server i connect to gives me the gameplay pending message with a grey screen, when i tried normal renegade on its own i get the exactl same..... The only way i can play is to create my own server but his isnt good as i only have 1meg.

So after searching google a number of times and finding nothing except the odd person posting similar stuff on other forums i must ask for help

Details

- There are other people in the server.
- Ive reinstalled Renegade and WOL.
- The correct connection is selected in "My Information"
- I have told my firewall "PC Guard" to allow renegade to connect to the net.
- I dont have Renguard installed as i always get problems with it.
- The latest renegade patch is installed (1037 English)

If any1 has any idea what on earth is wrong please help me.
