Searching for hub.n00bstories.com A record at ns1.n00bstories.com. [67.19.143.5]: Got CNAME of www.cia.gov. and referral to b.root-servers.net [took 307 ms]
--

Lame (and potentially illegal) attempt on Crimson's part to her hub from DDoS attacks. I can understand adding an a record to a 169.254.32.43 or similar (Per RFC 3330), but the CIA isn't going to be happy if they figure out your DNS server caused them to get attacked. Oh well, her network.
