done that...searched registry for everything renguard and deleted it...to no avail.

To be more specific, here are some screenies of what i get when i run renguard setup.

Attempt to 'Modify' or 'Repair' and you get a notification stating it is not possible.

So i turn to the final option, uninstall (in the hope of reinstalling from scratch).

The progress bar freezes at that point, approx 5%. However after, it says the operation was completed.

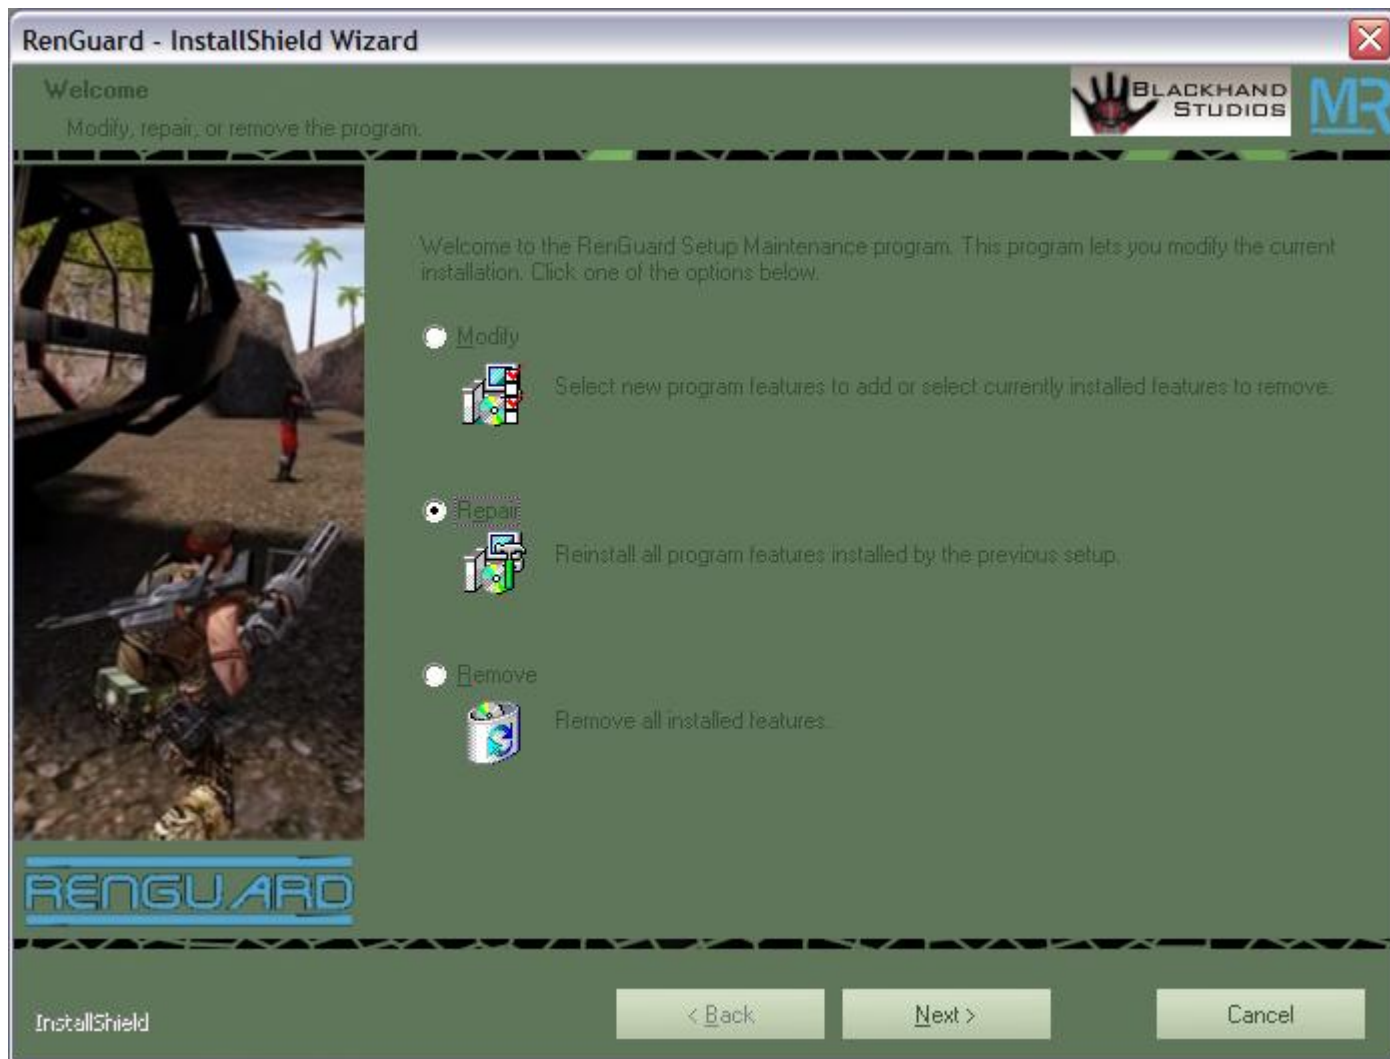

After that, I run the setup again to reinstall and it still comes up with repair/modify/uninstall.

Renguard does not appear to be installed ie no game2.exe and game.exe is the renegade executable.

Also as I said.....i just reinstalled renegade and actually lost my data folder so nothing in there should be a problem.
