This is a program that works to clean your Renegade directory of unimportant files for example, the client/renlogs logs.

#### Requirements

-----

.Net Framework 2.0

#### Options

-----

#### Delete

1. Client Logs
2. Crash Logs
3. ReadMe's
4. Patch Notes
5. Server Logs (If Any)

#### How To Use

-----

For the client open the program, press "Change Dir" and select "Renegade.exe". After select which options you would like to clean, and press "Perform Actions". A Message Box will appear once the program has finished cleaning.

For the server, do the above but instead of selecting "Renegade.exe" choose "RenegadeServer.exe".
