You only have 30 mines, so you can only use about 25 for defense. This is not enough to mine the tunnel in two places. Place 6 to 9 mines at the end of the tunnel before the T. Then scatter out 16 to 19 across main entrance. I always use more mine at the sides of the main entrance. Most people will try to stay against the walls when sneaking in. I then face the wall in third person and monitor the mines. This is good to catch mine jumpers, and I can hear if Nod is disarming the mines in the tunnel. If you don't have the patience to monitor the mines, then don't waste your time mining. You are better off striking as quickly as possible.
