replace all bytes from 0x004C10FC to 0x004C11A2 (that includes 0x004C11A2) with NOPs (hex code = 90)

V00d00 wrote on Sat, 27 May 2006 Technically, that should be 0x000C10FC to 0x000C11A2 in a hex editor. But, far simpler is to write the bytes: E9A2000000 at offset 0x000C10FC (JMP 004C11A3), or in memory 0x004C10FC.
