Hi,

I've got a problem with my w3d viewer: When I open the program but I can't see it. The only thing I'm able to see is the little window which I can use for the rotation of objects. Behind that window is just my desktop, that's it. I can also open files by pressing strg+O, but after opening them there's still now change. Even trying to install the program again and again brings no change ...

Does somebody have any idea how to solve that problem?

Because it's pretty hard to create new icons for Reborn without the w3d viewer ...

Thx, Kalle
