Depends on the number of players you want but I can most definately tell you this won't be enough normally.

If you don't have a double cpu, I wouldn't host more than one server anyway. Renegade (and its regulators) is very cpu hungry. Also two instances of 10 player servers will need more cpu than one instance of 20 players.

So yeah, CPU power is the problem. Bandwith shouldn't be a problem unless you get as popular as the n00bstories server .
