Is that mobo that Exdeath pasted really great? I was looking more into it, it's got an integrated sound chip. The Asus Crystal Sound system, 6 onboard USB ports, SATA support, All kinds of overclockers tools, Two Ethernet ports, Raid Support, And theres something on the panel I cant tell what it is, it's a yellow jack. Looks like a Video jack almost. I can't tell what it is but I think it goes to whatever the black horse-shoe shaped thing is in the accessories package shown on Newegg. I think I've settled on this mobo and an AMD 64 X2 4200+. What do you guys think about just that so far?
