The auto detect works fine as it should. It only pulls me down to 56k when I forget to switch my Router on.

I have 6Mbits down and 670Kbits up, Renegade puts me on 4M/1M. But I can agree, the BWexploitfixer works fine also.

Good players should set up Renegade up to LAN/T1 (1,5Mbits up AND down) manually if they have at least 128Kbits or more Upload.
