I had this before and never managed to really solve it. What I did was open brenbot.dat with an sqlite editor and delete all the entries in gamelist and then delete all the c&c\_field.mix, ... (or were they called differently?) and results01.txt, ... in my renegade\dfs directory.

Then restart brenbot and set gamelog on. usually this worked until it happened again.

It's solved now as I'm using brenbot 1.43 now.
