Run it from cmd.exe and the text will stay on the screen so you can read it.

EG, if your bot is called bot.exe, in the folder C:\mybot

```
run cmd.exe
type
cd c:\mybot <press enter>
bot.exe <press enter>
```

Your bot will run, and when it crashes it will stay on screen

EXAMPLE;

I cut most of the window off, but you get the idea.

A screenshot of a Windows command prompt window. The title bar reads "I:\WINDOWS\system32\cmd.exe - brenbot.exe". The command prompt shows the user navigating to the directory "C:\RenegadeFDS\Server\BRenBot\" and then running the command "brenbot.exe". The output of the command is "BRenBot 1.43 MSWin32. brenbot is Copyright 2003-2006 by Blackhand Studios. All Rights reserved."
