No you can connect to Renguard fine without the core-patches. You seem to be on of the n00bs that doesn't know how to disable them.

When Renguard opens up, in the Renguard window click options, then check disable core-updates. That's how you disable them. Than you can play with Renguard but without the corepatches. I happen to think having at least corepatch 1 is important though, and corepatch 2 is just so excelent. So I have 1 way for you to try getting corepatch 2 that may work, if it doesn't then just go with corepatch 1 because that's still pretty useful. So try it out.

To try to get corepatch 2 working, I would suggest trying to use the non-rg corepatch 2 installer stickied on the corepatches board. Do this after a fresh reinstall though when your having no problems and NO corepatches. So do not install corepatch 1 before you install the second one. If you still get problems reinstall renegade and just play with renguard and corepatch 1 and have your core updates disabled in Renguard.

You can use this standalone cp1 to install CP1. http://download.renguard.com/standalone_cp1.zip

Because from what jonwil said:
jonwil wrote on Mon, 13 March 2006 22:09
If you have CP1 installed (or if you have changed the registry to make it think you do), RenGuard will download CP2.
IF you have neither installed (or if you have changed the registry to make it think you do), RenGuard will download CP1+CP2.
IF you have CP2 installed (or if you have changed the registry to make it think you do), RenGuard will install nothing.

Which I think means Renguard will always download the Corepatch 2 when downloading core updates. Which you don't want if it's not working. So you want to disable core updates, when you first install renguard after a fresh reinstall it will ask you if you want to download the core updates. So if you have already tried the non-rg corepatch 2installer I told you to and it didn't work, and want to use only corepatch1 then after you fresh resintall and the reinstall of renguard then select NO when it asks you to download the core updates. then use standalone core patch 1 installer.

Well I got a little sloppy with this post but it should have been simple to understand. If not re-read it a few times.

Oh and remember, before installing Renguard you have to update to official renegade patch 1037. which you can get from here: ftp://ftp.westwood.com/pub/renegade/updates/Renegade_1037_English.exe
