Flat panel = office hardware /piece of furniture /TV screen for Disney. A true gamer would only use CRT, right? No one mentioned the graphic interface or chip-set. Is it an AGP, PCI-Express or God forbid PCI. What is the bandwidth, is it set to 4x or 8x or 16x? What about an over heating issue at the GPU or CPU? What sound card is he using?

Set the refresh rate to 75, resolution to 800 x 600. Set the video card drivers to run at max performance, lower the sound quality. Use Riva-tuner and CPU-z to monitor the temps, and bandwidth.
