I use AntiVir. It's a freeware scanner and therefor not everybody would take a chance using it, but i'ts a very good AntiVirus program and has never failed me. I would recommend it to many people. Oh and it's won awards just like Ad-Aware SE antispysware and Zone Alarm firewall. All super products.

If your virus scanner is your problem with Renagurd, or thou think it is, try a new antivirus. You don't have to, like if you were very comfortable with what you have or are one of those scaredy cats afraid of change.

AntiVir try here: <http://www.free-av.com/>
