Hey,

Well i am not the one who really needs any help but my bro does. here is the addy to his blog and it explains it blog (u will have to scroll down to thrus. July 20 for his prob)...u can make comments on there or post them here and i will relay them to him....he said he has tried what ever he could to recover it and it just isn't doing anything.

"i closed it after working on it during my lunch break and clicked yes to save changes. then when i opened it later on, poof, all gone

nothing i have tried has brought it back, it always opens as a blank page"
