i dont think anybody has landed on the moon, due to the fact the suns radiation would kill them. there are many more facters.

What do you think?

Wouldn't the radiation kill the space walkers, shuttle riders or Space Station orbiters in the last 47 years? Or do they wear ozone generators in their suits and craft? For that matter, where there are holes in the Ozone already, wouldn't there be a circle of death where those holes hit the surface!?!?

NO, we are protected from radiation by the earth magnetic field. spacewalkers are protected by that.

The ozone layer does not protect us from radiation, it protects us from ultraviolet rays? i am not certain.

anyway a contry didn't know about the hoax and though it was posiible, so on their spacecraft the put a 6 feet lead sheet around it. to protect it from radiation, well you could imagine what happend on take off.
