---

it isnt, i checked, it just refuses to connect to the master servers. I uninstalled all the firewalls and disabled the windows firewall and STILL it refuses to connect.

My mistake on insulting the host the other day, I was just in a bad mood, tis all.

But any help would be greatly appreciated on this. I can give you my basic computer specs. if needed.

Acer Incorporated  
Intel(R)  
Celeron(R) CPU 2.93GHz  
248MBs of Ram

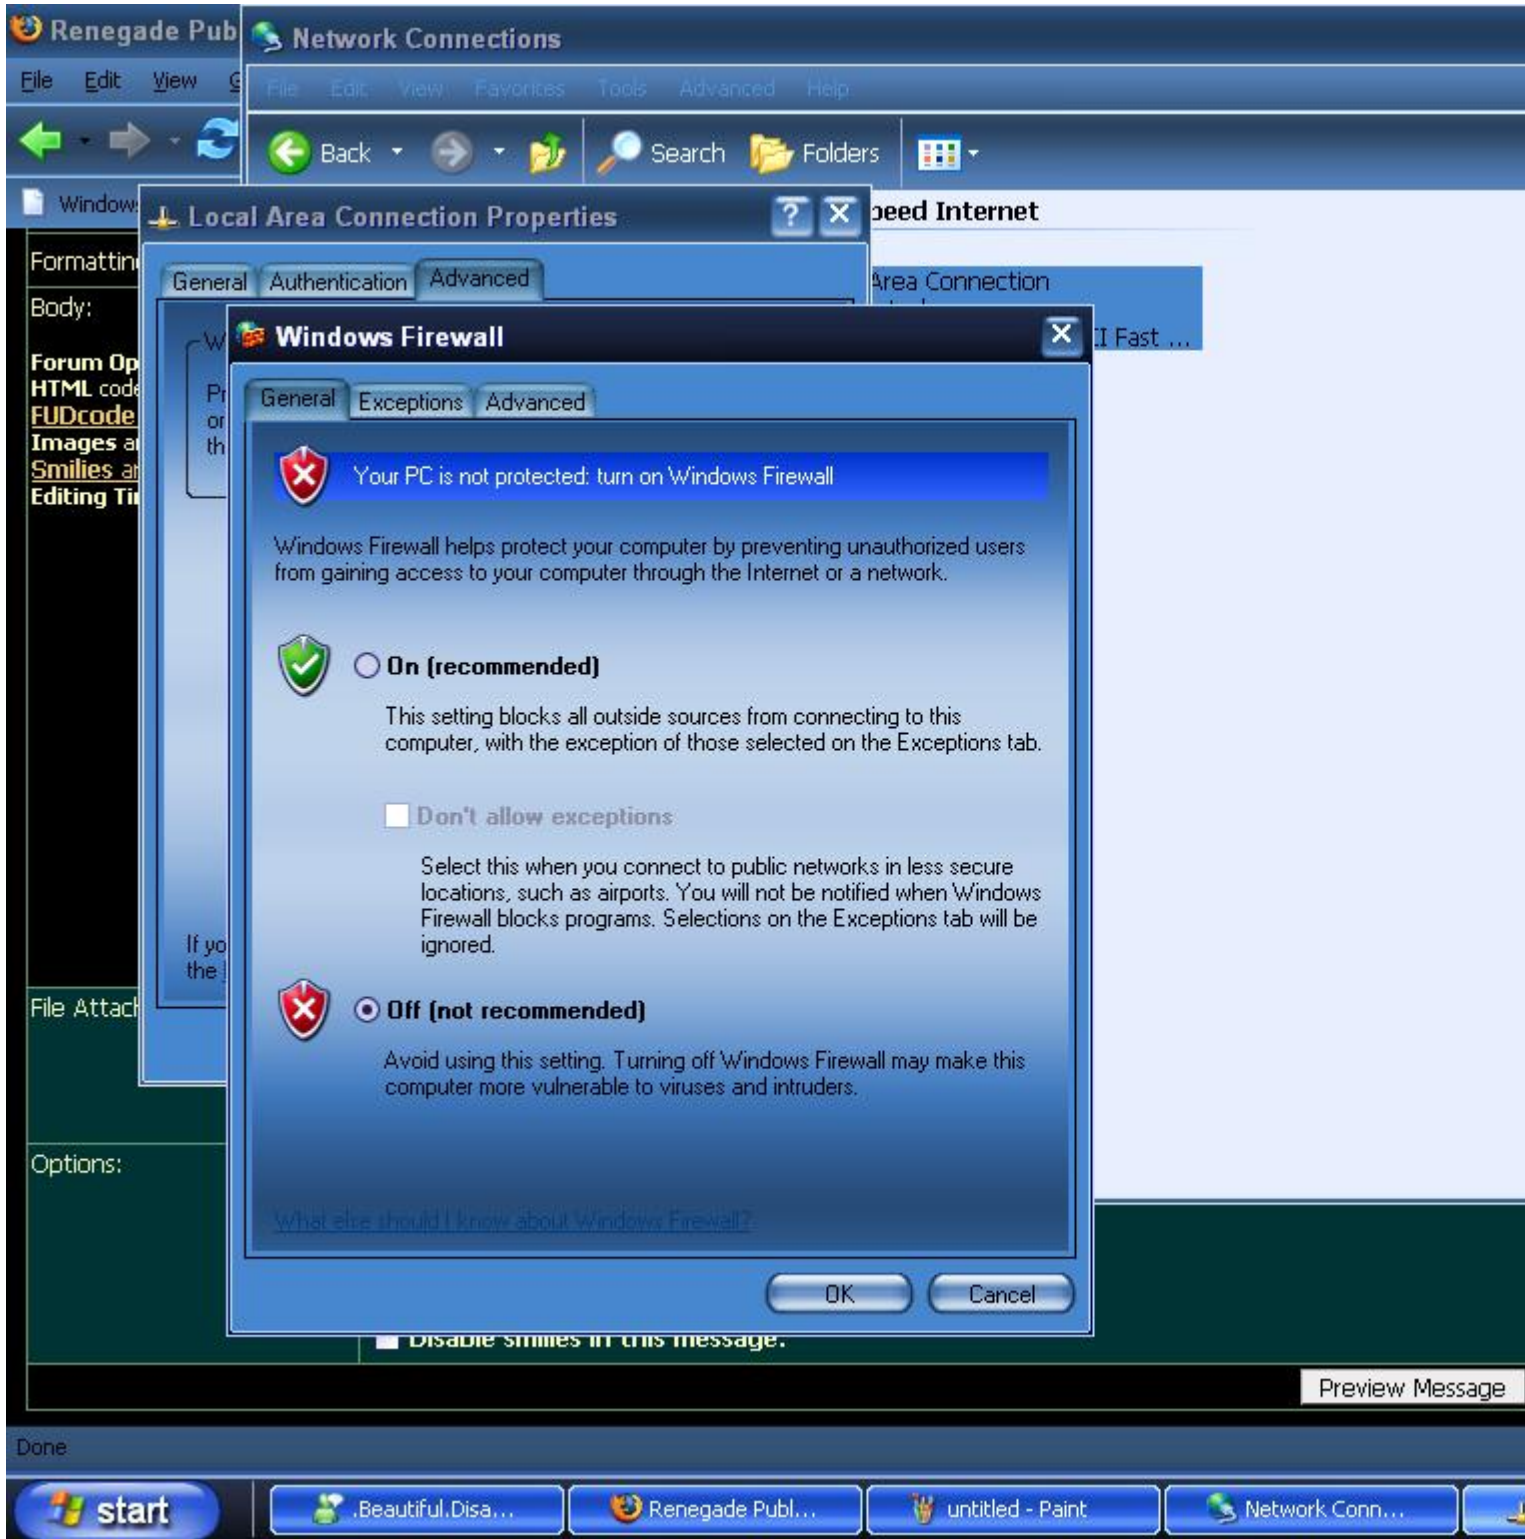

Microsoft Windows XP  
Home Edition  
Version 2002  
Service Pack 2

So if thats of any significance, use whatever you need. I'll include a few screenshots of what results in starting up rengaard, and how i disabled my firewall, in the off chance i did it wrong, and how i also approved game.exe and game2.exe to be connected to the internet.
