edit config.cfgand make sure it had the following...

[Bot]
fds_path = C:\Westwood\RenegadeFDS\Server
auto_secs = 30

fds_path = your server path the one above is the default
auto_secs = seconds between the each autoannounc

all you should need to do is run the program!

make sure untill the next release to run the bot just after FDS has started and loaded a level
otherwise it will not properly if the FDS restarts you will have to restart the bot as well
