If you read the RG readme file it says on there

Read #3

Quote:PLANNED FEATURES (Either planned to be done by release, or next major update)

1. Server MOTDs

Server owner can design their own mini HTML page that is displayed to players when they connect. This page can contain anything from server news to logos and URLs.

2. Client localization

RenGuard client buttons and controls displayed in the same chosen default language as the MOTD.

3. Map Notifications and Autodownloads

RenGuard will warn you that the server you are connecting to has maps in its rotation that you do not have installed. Options to automatically download and install missing maps may be added.

4. Security enhancements. Although Renguard is very complex and secure from most tampering methods, we already have more improvements planned. We could delay the release until RenGuard is "perfect", but the current protection should stop most if not all current cheating...we want it to stay that way and will keep updating the client as necessary.
