I know what you're saying Halo38, but i was actually considering upgrading my mobo in the first place. and now that everyone is suggesting it it's kinda drawing me back.

I admit, i'm quite impatient to buy things.

The most appealing mobo was the one i mentioned earlier (the ASUS one), since it had a PCIe slot, 4 DDR slots and it would fit in my case. But apparently only 13 Asus GPUs work in it. So I've looked at other mobos that don't fit in my current case, and the most appealing is this (the first 3 reviews kinda put you off :-/):
