It's be design. RG does not allow multiple computers to connect from the same IP with the same username. This blocks an exploit where someone could connect to RG with no cheats, and let it just sit there so they are "on RG", and then connect with another PC with cheats loaded (not running RG). Then could then join a server and cheat and if someone !rg'd them, they would appear to be on RG.

Yes its sad the extent people will go to just to cheat.
