right after realising a load of bugs, i have fixed mosgt of them, but i cant offer a release yet as help-linux.com is not down. but when the new domain come on i will have a server for it too.

todo:

a few more sounds;

i am going to improve the plugin.txt feature to include "if" statements;

read from logs instead so you dont need rlmon.

maby shortcus as in, you type into teamchat: bapp and it will translate that into "beacon at power plant";

mIRC support i will make it optional;

maby rengaurd server, hopefully Crimson will let me. fingers crossed.

more commands for admins/mods

ladder (i have almost got this finished)

fix a memory leak, i am having trouble finding.

also i am re-writing code to make it easier to add commands, but i also need to add code so it is easier to get game info and add general game commands.

any suggestions you would like to make?
