i was on my server today and they was some ppl on saying this kid called foukbug06 was cheating, so as a moderator i asked him to do a test where he shoots around my head then does 1 shot onto my leg ....he refused, so i did the !rg command on him i got a reply he was connected bla bla bla thats it he is not cheating i thought..

map C&C_Under loads up me and my team mates donate to get apc we rush towards the agt and foukbug06 shoots at us when were at the side of the agt we get destroyed then all of us got killed by this foukbug06 kid.

i did the !rg command again it said he was connected. They was no mines or n e thing to kill us that fast.

how could this kid have renguard and have cheats on aswell ? has renguard been broken so ppl can now byepass it ?
