LR01 wrote on Sat, 09 September 2006 04:29are the shortcuts different from renx?

Some are the same some are diffrent, but you can assign your own. Here is an example of how with my favorite shortcut

"zoom extents selected all"

which, when you have an object selected and press your shortcut key (Z in my case) max zooms in on the object in all your viewport windows - great time saver. This is the default shortcut for 'Z' in 3ds max but not in renx.

so go to...

Customize --> Customize User Interface

1. So you can read the 'Actions' clearly drag the shortcut cell to the right

2. click "Zoom Extents Selected All"

3. put a 'z' in the Hotkey box

4. click assign now close the window by clicking the cross (X)
