---

Just got a system with AMD Athlon 62 X2 and Windows XP Pro X64 on it. It has Duo NVIDIA GeForce 7600 GT (driver v.9.1.3.6) and NVIDIA nForce Network adapter (driver v.55.2.1.0).

The installation of RenGuard\_Setup\_1.03.exe looked OK. But there was no renguard running after I started renegade. In fact, I had to use game2.exe under the installation folder to start renegade, otherwise the graphic was a mass. Is it because the X64 OS? Help please. Thanks.
