Hi i see that Ren Forum's is full of ppl wanting to know how to set up a server and needing a serial number for it, And im sure ppl are geting tried of telling them, if you would make this a sticky than they will not have to find it, and they will not make new topic's about it.

This SERIAL WORK's FOR ALL Renegade FDS 066900000000000000000000etc

Than after you do that you will need to go and change it after installing it.

So go to C:\Westwood\RenegadeFDS\Server And find SERVER.INI.

In that you can change your seting's and put YOUR RENEGADE SErIAL IN the one that you installed your game with.And your user name if you did not put the right one. plz do not be stupid and put your log in name to Renegade in there if you do you will not be able to sign in.

Now run it and see if its in Renegade server list if so shut it off.

Bot TuT

I will be useing NR nightregulator cus i like it.
Here is the website download and install it.http://www.nightregulator.co.uk/?page=news
Now that it is installed open it you will probly get somthing saying SSAOW can not be enabled blah blah NOTE: that is only if you do not got it installed.

Set up the bot the way you want it Run the server go into it, run the bot connect it to your FDS when in game you should see that the bot is runing if not that contact nightma.
-- -----
Hope this helped you.

P.S. Hey nightma can you make a bot that will run a RenAlert APB Server?

And im having problem's with your bot i did somthing again like the last time.
