---

as I have renamed the "Server" folder, I have to remove all "/Server" string in the xwisp.pl

Hmm. that's funny.

Here are my settings:

Port = 14848

GameSpyGamePort = 14848

RemoteAdminPort = 14849

I've tried to set Port and GameSpyGamePort to 4848 and the same problem happen too.

And for the gamespy port 32 problem, it happen in the following case:

1. using xwisp with scripts 2.9.2

2. using scripts 2.9.2

but not:

3. running the unpatched LFDS

I didn't change any setting between these tests.

EDIT: the macrem do not disconnect after commands because it is used for output when LFDS output. For example, I enter "help" and it should return the help message but not disconnect. And it should output what FDS said, for example, the join / left message, maybe.
