Since a few days I've got renegade. (If of any use, it was one of the games in the first decade pack) However, everytime I tried to play an online game I had problems.

Sometimes there's a long blue screen that says 'gameplay pending'(don't remember exactly).

But everytime and on every server the game 'stops'after a few minutes or less. Everyone is shooting or standing still. After that I get disconnected.

Does anyone know what is wrong? And of course what can I do about it?
