dont buy a laptop from dell!!! they stop charging after awhile (internally)
So thats why mine does not charge right?
Sorry if this is off topic.

All rechargeable batteries do that.

not after 200 charges, and anyway they suddenly stop working a rechargeable battery would gradually stop. i do know about this as u use rechargeable batteries alot in my planes. if they do start losing their capacity all you do is "discharge" it and it will be fine again.
