[NR] is great cause you have a guy who keeps on working on it. Nightma is a great guy, he keeps on making betas, he debugs every bug within 1 day of his notice, personally. [NR] is the 3rd bot standing as of right now.. Only cause it has horrible .ini settings. Damn thing has like 9000 lines! He needs to make it more usable for FTP users.. Otherwise, it would be #1. But BRenBot and CloudyServ have the lead *right now*
