Hey, thanks for that... but i copied everything you have (of course, with exceptions of passwords and serials stuff) and it doesnt work!

it still says "creating game channel... failed to create game channel" ...

By the way, by changing the server name, you meant changing the "nickname" in "server.ini" to a nickname i dont use to play online in renegade right? well ... ya... i did that.... i changed it to another nick i had registered before, but that i dont use, and it didnt work.. i also tried putting an unregistered name, and it also didnt work...

i really wanna host my own game! thanks so much for the help! anymore will be greatly appreciated! thanks man!
