RemoteAdminPassword=wanabe12 (The password needs to be 8 characters in length!)

taken from your doc

no the password does not have to be 8 characters.... only BR requires that as far as i know? its something to do with the encryption they use

You are correct the password does not have to be 8 characters in length. It was written for the novice in the event they went with BR. I appreciate you pointing that out. I will modify the document to reflect it.

It appears it was a serial number problem after all.

Tony
