I am having a problem with two scripts if you can help me with either please reply.

First off the script "JFW_Bounce_Zone_Entry_All_Directions" if can get you to move along the "X" and "Z" axis just fine, but I can't seem to get the "Y" to work. I have tried rotating the zone, and a few other things but nothing seems to work. And I close inspection, it doesn't look like in the scripting that it is even set up to work for the "Y" axis, and if thats the case I guess I will have to make my own scripts package to fix a few things.

Second problem is with the script "MDB_Remote_Controlled_Vehicle" and it is just a minor problem I found with it (I also reported it but there was no reply to it). I can get it to work fine, but when I attach it to aircraft and you buy the aircraft nothing happens but your money drops lower.
