Subject: Webhosts

I'm with GoDaddy and have been for ages, but I've started getting slow download speeds from them (~20kb/s) probably because of a slow route since they say it's fine (the problem isn't my end, MS servers give me ~8mb/s).

So I'm looking for a new webhost - which ones do you recommend? I need it to be Linux, cheap and with SQL hosting too, preferably at no extra cost.

Thanks.
